

WHAT IS A HEALTHY HOME?

A Healthy Home supports the well-being of the people living in the home in many different ways. It does not contain health or safety risks, produces less waste, and consumes less energy.

LET'S MAKE YOUR HOME HEALTHIER AND SAFER FOR YOU AND YOUR FAMILY!

All homes have safety risks and conditions that could be unhealthy. We can help improve your home by finding and educating you on how to reduce safety hazards, health risks and improving indoor air quality. Learn how to make your home a safe and healthy environment.

GET A FREE HEALTHY HOME ASSESSMENT

The Healthy Home Environment Association is training returning veterans to work in the local community. In order to kick start their careers, the veterans are offering FREE Healthy Home Assessments to local military families.

If you are interested in this Free Assessment, visit www.healthyhomeworkforce.org and fill out an interest form. Or call 619-663-8034 and leave a message with your name and the number to call you back.

This offer is a limited First Come Basis, so do not wait to sign up! We will be enrolling families in November and completing the assessments in December 2017.

Please call or visit the website now because the Free Assessment will only be offered this once.
